

Laser Therapy for Chronic Pain

Are you in constant daily pain and it seems you've tried every lotion, potion, and therapy without success? Have you ever been told "you just have to live with it?" If so, perhaps Laser Therapy can "shed some light" on a possible solution.

Injured tissue often gets "stuck" in chronic inflammation and doesn't move on to the repair phase of healing. Think of it like a record with a scratch. The body is in an endless loop of pain, telling you that "something is wrong". Medications may mask the pain, or reduce the inflammation, but they don't really heal the underlying condition.

Laser Therapy stimulates your injured tissues naturally, thereby reducing inflammation, eliminating pain and promoting true healing. We know that plants absorb sunlight and use that energy to grow. Scientific researchers have found that human cells can also absorb light and use that energy to heal. LILT is a well-documented, clinically-researched treatment option that uses concentrated and amplified light to stimulate and accelerate

healing. It is non-invasive, painless to apply, and has little to no known adverse side effects. It is also covered by most major medical insurance plans!

Sound too good to be true? Some conditions which have been successfully treated are:

- Arthritis
- Low back pain with or without sciatica
- Rotator cuff injuries
- Plantar fasciitis
- Carpal tunnel syndrome
- Tennis elbow

If you are suffering from chronic pain, laser therapy may offer you the "light at the end of the tunnel" that you have been looking for!

Dr. Wayne Terai has over **24 years of experience** successfully treating musculoskeletal conditions and operates the largest Bio-Flex Low Intensity Laser Therapy Clinic in the Interior of BC.
